CIRCULAR FASHION

Is your company ready for the circular transition? There are a lot of good reasons to think about your products in a circular context. We have a responsibility towards the environment, and in a short amount of time, new legislation from the EU will set a course for the circular transition.

1: New Legislation

- Collection of textile waste in DK by 2023 and in the EU by 2025
- The EU is launching an ambitious textile strategy which will become effective by 2030.

This means that we, the textile industry, must recycle used textiles and think about how the recycled fibers can be used in new products.

2: Which products containing recycled fibers can we expect, and what is the price?

Expect that most of the product types you know can be made from recycled fibers. The price level will be comparable to the recycled materials, that are already on the market.

3: When is it possible to use recycled fibers in your new styles?

It will be possible by 2023, when we start collecting textile waste. Thereby, the large scale production of recycling fibers will be possible, and NewRetex can become your partner.

4: Take Back

If you are considering implementing a take back system, NewRetex can also help find a solution. We accept both large and small amounts.

If you want to learn more or visit us for an informal talk, contact me:
